

HUDDLE HELPER™

Extended Masking

1/3/2022

The **CDC** allows for **EXTENDED USE** of N95 respirators. This means you wear your respirator continuously from patient to patient or throughout the shift. Under extended use guidelines, you should replace your mask if it loses its fit/function, becomes damaged, soiled, after meals, or after eight hours.

SJH is mandating **extended use** of an N95 for **all employees** entering the clinical environment. Please wear your N95, at all times, while in any patient service area.

1870+

item # 55695

We are introducing a new mask for our extended use protocol. The 1870+ has a thicker foam for nose protection and a wider frame making it more comfortable.

Face Shield

item # 11913

Universal eye protection is required (your personal eye glasses are not enough). Preferred eye protection is a face shield to protect you and the mask.

Eye Shields

item # 3096

Face Shields and Eye Shields (goggles) can be disinfected between use and reused as long as shield visibility is maintained.

FIT TESTING

You must be fit tested in the new 1870+ mask. We are fit testing all week on both campuses:

- Paterson—Getty Rm (basement)
- Wayne—Cafeteria

Please refer to email communication for specific times.

If you miss a fit testing session, please contact :

FitTesting@sjhmc.org
